

Care/washing instructions for alpaca fibre

Odours/light soilings

Alpaca fibre is a high-quality natural fibre. Due to its distinctive natural self-cleaning characteristics, in most cases it is sufficient to air alpaca fabrics in the humid air or during rainy weather.

Even strong odours will vanish in the fresh air.

Heavy/visible soiling

Alpaca fibre is washable of course. However, please only wash your alpaca fabrics by hand. For doing so, use some lukewarm water (max. 30 °C/86 °F) with a little bit of mild hair shampoo. Please thoroughly rinse your fabrics and refrain from heavy rubbing and wringing to avoid felting. Please rinse with clean lukewarm water without any shampoo.

For drying, bring the fabric in its original form and dry flat to avoid stretching.

Please refrain from dry-cleaning and make sure to protect your textile from moths.

In case you have any further questions regarding the care of your alpaca fabrics, please feel free to contact us. We are happy to assist you with individual advice.
